ZYGON

An Ethics for Our Time

Science and technology have catapulted mankind into a new world where the old rules don't apply, where a changed conception of human nature and a new way of life are required. Even so, many in the scientific and scholarly world shut themselves off from serious concern with the relation of science to a new vision of human values and destiny.

Zygon: Journal of Religion and Science seeks to illumine the basic issues which relate theology to the sciences. The journal asks the question: Can religion and science survive apart?

The excitement of Zygon lies in *conflict* and potential *resolution*. Thus, the journal is much more than a registry of the current literature in a field. **Zygon** presents a challenge—and provides a forum for those concerned individuals working to meet it.

With exceptional vision, **Zygon** treats the most fundamental issues which confront our life. Contributors include some of the most distinguished scientists, philosophers, and theologians. They ask vital questions—questions about fate and faith, death, violence, ecology, genetic control, scientific morality, cybernetics, thermodynamics—seeking to integrate man's notions of what is meaningful and sacred about his destiny with his scientific understanding of himself and the world around him.

You will find no simple answers in Zygon. Instead you will be stimulated to ask more questions and seek more answers.

"... Our primary task is to build a new community of minds in which the new knowledge or information about facts in general is connected with the basic facts about life's values."

Ralph Wendell Burhoe, Editor

Coming in Zygon

December 1972 (vol. 7, no. 4)

"The Scientific and Technological Revolutions and Their Implications for Society" by R. B. Lindsay

Zygon: The Current Issue

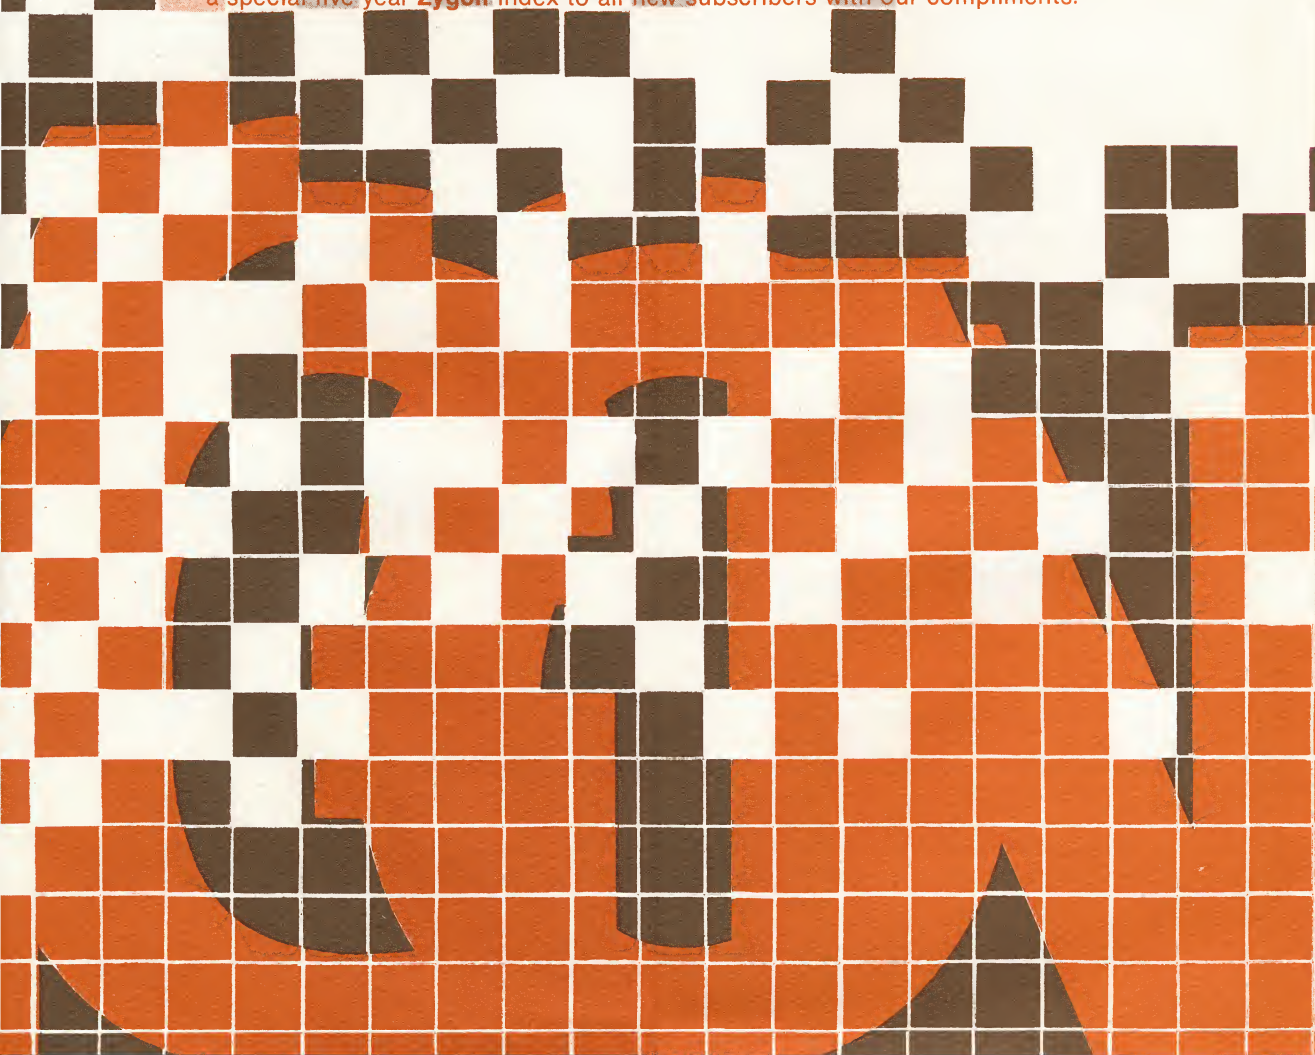

Since its inception in 1966, **Zygon** has upheld the view that present religious ideas and practice must be reformed if religion as a value-transmitting institution is to continue to be effective. A clear formulation of the task appears in the current September issue:

In "Churches at the Transition," Jay W. Forrester wonders if the churches of today are propagating an ethical value structure that is compatible with a desirable future condition of mankind.

Ralph Wendel Burhoe's "Evolving Cybernetic Machinery" is a powerful essay on the confrontation between men and machines.

A proposal for the establishment of an independent institution dedicated to interdisciplinary research carefully details a methodology for future study in religion and science.

September is a landmark issue. Here is both a synthesis of efforts previously reported in **Zygon** and a new beginning. Start your subscription to **Zygon** now. We will send a special five-year **Zygon** index to all new subscribers with our compliments.
